RECENT CONTRIBUTIONS

kubernetes – open source system for managing containerized applications

devguard – Go-based vulnerability scanning platform.

devguard-web – Next.js frontend client.

kagent – kagent is a Kubernetes native framework for building AI agents.

ocm k8 multicluster management

Skills

PROGRAMMING LANGUAGES

• Go • Java • Python

BACKEND ENGINEERING

• Spring Boot • Gin • MySQL • Redis •
Kubernetes • Docker

GEN AI AND LLM

• LangChain • MCP Servers •
ChromaDB • FAISS

Honors

- Winner of DeepIntent's Annual Company-Wide GenAI Hackathon (April 2025)
- Finalist PASCKATHON (Sept. 2020)
- Finalist Rakuten India Hackathon (03/2021 - 04/2021)
- GeeksForGeeks(200+ Problems)
- LeetCode(400+ Problems)

Experience

DEEPIINTENT

SOFTWARE ENGINEER II

📅 Feb 2025 – Present | Pune

- Exploring **time-series forecasting models** to efficiently predict impressions and budget metrics across large-scale clinical datasets.
- Designed and implemented GraphQL-based APIs with Spring Boot, leveraging DataLoader and BatchLoader patterns to optimize query performance and reduce redundant database calls.
- Architected and implemented comprehensive bulk edit operations across UI and API layers for DSP platform, enabling simultaneous updates to **creative assets, budget allocations, frequency capping, audience targeting rules, conversion goals, unique reach settings, and ad group flight dates** across multiple campaigns.
- Technology Stack: **Spring Boot, GraphQL, MySQL, ClickHouse Docker, K8, React.js, Python**

DEEPIINTENT

SOFTWARE ENGINEER

📅 April 2024 – Jan 2025 | Pune

- Led a company-wide initiative to deprecate a legacy entity that had existed since the company's inception but was no longer valuable and often caused customer confusion. Conducted in-depth research, redesigned the functionality, and coordinated changes across 10+ repositories (**UI, API, and data layers**), successfully simplifying the system and deploying the solution to production.

IDEAS REVENUE SOLUTIONS

ASSOCIATE SOFTWARE ENGINEER

📅 July 2023 – March 2024 | Pune

- Worked on UI using vaadin for G3 (revenue optimization product) and its integration with the backend services.
- Technology Stack: **Spring Boot, Vaadin, MySQL, Docker**

ALTAIR

SOFTWARE ENGINEERING INTERN

📅 Feb 2022 – April 2023 | Remote

- Improved existing API to meet the platform SLA, maintained low response times, with an average API response under **20 milliseconds** even under heavy concurrent loads.
- Achieved **40% reduction** in build size compared to the previous Spring Boot implementation, leading to faster deployment and improved system efficiency.
- Authored new system design architecture for health monitoring systems to be implemented in existing products.
- Technology Stack used: **Golang, Docker, Avro Schema, Node.js, React.js**

SORCEO TECHNOLOGIES PVT LTD

SOFTWARE ENGINEERING INTERN

📅 Aug 2021 – Nov 2021 | Remote

- Worked on building a **Vendor Management System and Auction Platform**.
- Implemented Scalable Backend API using **Express.js, Node.js , MongoDB**.
- Technology Stack used: **React.js, Node.js , MongoDB**
